Deciphering Siemens date codes on telephones

(after an article by Kuno Rotter and Dietrich Arbenz)

A Siemens date code is made up of 3 parts. The first part is the production location, the middle the production year and the last part is the production month.

Above you will find a typical early date code. In this case the item was made on production location B, Berlin Siemensstadt, in the year L, 1930 and in the 6th month, June

See next table.

To the right is the table with year letters. The dark cells indicate that a letter was not used, mostly because they are similar to certain numbers like the o and i.

Month codes

Usually just a number was used corresponding to the month in question: 1 = January, 2 = February, etc. From the 70s onward letters were used for the months October, O, November, N, and December, D.
